OBJECTIVE STATEMENT

I am a computational social scientist, investigating the impact of new technologies like blockchain, the metaverse, and AI on human behavior, and developing ways to promote social connections, foster innovation, and reduce inequality. With expertise in machine learning, causal inference, and network science, I bring a valuable skill set to cross-disciplinary projects. My work emphasizes a commitment to translating data insights into actionable impact.

EDUCATION

Northeastern University

PhD in Network Science

Research direction: network methods and social impact

Advisor: Albert-Laszlo Barabasi

September 2020 - Present

Boston, Massachusetts

University of Washington

Bachelor of Science

Mary Gates Research Scholar, 2018

Major: Informatics - Data Science; Minor: Quantitative Science

Advisor: Jevin West

September 2016 - June 2020

Seattle, Washington

TECHNICAL STRENGTHS

Computer Languages

Python, R, MySQL, d3.JS, Three.JS, Java, React, HTML

Software & Tools

RStudio, Gephi, Google Cloud, BigQuery, pandas, pytorch

EXPERIENCE

Meta Inc.

May 2024 - Sep 2024

Research Scientist Intern, Computational Social Science

- Meta-analysis of experiments on Meta platforms with a focus on social network in cross app settings.
- The results helped inform the future launch strategy and guardrail setting for FB and IG products.
- Key skills: Online experimentation, network analysis, statistical methods, product analytics

Center for Complex Networks Research, Network Science Institute

Sept 2020 - Present

Graduate Research Associate

Gender segregation and elite performance in intellectual domains

June

2023 - Present

- This study presents quantitative evidence on the impact of gender-segregated chess events on the career advancement of female players in intellectual domains.
- I apply causal inference methods to analyze the career trajectories of players based on data from over 8 million chess games. Additionally, the project provides mechanistic insights through move-level evaluations obtained from Stockfish.
- Key skills: Propensity scores, negative binomial regression, fixed effects modeling, machine learning

Human mobility in the metaverse

May 2022 - April 2024

- Mobility in the metaverse lacks the movement costs observed in the physical world, prompting us to build fresh perspectives on human mobility in the virtual spaces.
- I use over 250 Million movements in a massive virtual world, and identify the scaling laws that govern mobility. I developed a mechanistic model that can accurately predict emergent mobility patterns.
- Key skills: Scaling laws, statistical physics, Google cloud, blockchain analytics

Social processes underlying drug innovation in clinical trials

Sept 2020 - Sep 2022

- Drug exploration is influenced by social and market forces, affecting the prioritization of certain drugs and diseases over others. To quantify this, I analyzed over 350k clinical trials.
- Using statistical methods, I identify the fundamental mechanisms that govern drug exploration, and developed optimal strategies to support unbiased drug exploration.
- Key skills: Generalized linear mixed models, statistical methods, healthcare analytics and innovation

Networks and success in Crypto Art

April 2021 - December 2021

- NFTs took the world by storm after Beeple sold his famous artwork for over \$69 Million. But are all artists equally successful? What is the role of collectors, and fan base in ensuring artist success?
- I identify the important variables that determine success of new artists, demonstrate the presence of taste in the collecting behavior of collectors, and measure the network effects in crypto art.
- Key skills: Social networks, statistical analysis, success metric identification, NFT analytics

DataLab, Information School

September 2017 - August 2020

Undergraduate Research Associate

Network structure of co-funding in clinical science

July 2019 - August 2020

- Assessing the scientific impact of different funding strategies in clinical trials. The goal is to untangle the relationship between funding agencies through a co-funding network.
- Funded by the Bill & Melinda Gates Foundation and Mary Gates Research Scholarship.
- Key skills: Statistical analysis, scientific innovation, funding ecosystem

Measuring scientific buzz using keywords

July 2018 - June 2019

- Comparing the applicability of keywords and abstracts in describing research trends. I discovered that keywords are a powerful resource for identifying hot topics than abstracts.
- Funded through Mary Gates Research Scholarship.
- Key skills: Machine learning, predicting innovation, natural language processing

Mapping cross-departmental collaboration at UW

September 2017 - August 2018

- How impactful are multi-departmental collaboration at a large scale public university? We discovered an effect of compartmentalization where departments that collaborate together, also cite each other.
- I worked on disambiguation of departmental and institutional affiliations of authors over 60k papers
- Key skills: Network analysis, clustering methods, natural language processing

Information School, University of Washington

Spring 2018 - Spring 2019

Teaching Assistant, INFO 201 - Data Visualization using R.

- As a TA for over 100 students, I conducted weekly lab sessions, answered online questions, and graded weekly assignments. The course covers source control and interactive data visualization principles.
 - Key skills: Teaching, collaboration, communication
-

Genpact Inc.

June 2017 - August 2017

Data Science Intern

- Enhancing customer care analytics by automatic emotion recognition system by extracting voice features and unsupervised topic clustering of GM Financial chat transcripts using latent semantic analysis.
- Worked in a team of 4 people and presented a proof of concept to the upper management.
- Key skills: Applied inference, customer analytics, natural language processing

PUBLICATIONS

Journal Publications

The role of gender-based segregation in generating elite performance

TBA

Kishore Vasani, Louis Shekhtman, Judit Polgar, Larry Han, and Albert-Laszlo Barabasi.

In Prep

Human mobility in the metaverse

TBA

Kishore Vasani, Marton Karsai, and Albert-Laszlo Barabasi.

Under review: Nature Human Behavior

The Clinical Trials Puzzle: How network effects limit drug discovery

Nov 2023

Kishore Vasani, Deisy Gysi, and Albert-Laszlo Barabasi.

Cell iScience

Quantifying NFT-driven networks in crypto art

Feb 2022

SERVICE AND ACHIEVEMENTS

Mary Gates Research Scholarship 2018 - 2019

- A highly selective award given to undergraduates at the University of Washington pursuing research.
- I received this award to develop techniques to map research trends and study funding mechanisms.

Moholy-Nagy University of Art and Design (MOME) Spring 2021

- A part-time contract to advice on emerging trends in the art world using a data driven approach

Undergraduate Admission Committee Spring 2019

- Helped review undergraduate applicants for Informatics, a competitive major.
- Comprehensively reviewed the applicant based on personal statement, intent to major, and grades.

Society of Network Scientists, UW Fall 2019 - Summer 2020

Co-Founder, Vice President

- A campus wide initiative with an aim to promote and encourage research in network science.
- We host weekly reading groups on social networks, panel discussions, and invite distinguished speakers.

Reviewer

- Book on cryptocurrency, Oxford University Press
- Journal article, Electronic Markets
- Journal article, BMC Bioinformatics

- Journal article, Qeios

SELECTED CLASSROOM PROJECTS

In search of food

September - December 2020

The breakdown and robustness of food flow in the United States *Complex Networks and applications*

- Food flow patterns are an essential component of society and serves as a complex system of distribution between producers, consumers, and distributors. Yet, we know little about the impact of food epidemics.
- I find that every county is highly dependent on counties for specific food commodity, indicating a complex web of connections driven by food commodity.
- Finally, I find that the network is fairly robust towards targeted removal of distribution channels primarily due to the local dependence for food supplies.
- Key skills: Network analysis, robustness and criticality, food analytics

Crawling Wikipedia Graph

April 2019 - June 2019

Exploring the edit dynamics of users in Wikipedia

Statistical Analysis of Social Networks

- Mining large graphs reveals information; temporal network of the same reveal evolution. However, performing novel algorithms on these large graphs can be computationally expensive. We need methods that can provide an un-biased sample that would be representative of the underlying large network.
- In this work, we evaluated different random walks by crawling a large online editing network, *Wikipedia*.
- Our *findings* include - simple random walk is ineffective when sampling graphs with high tailed distribution, and re-weighted random walk outperforms other methods for graph sampling.
- Key skills: Network analysis, random walk models, internet analytics

COURSEWORK

Northeastern University

PHYS 5116 - Complex networks and application I

PHYS 7332 - Graph machine learning

POLS 7334 - Social network analysis

NETS 7341 - Network economics

PHYS 7335 - Dynamical processes in complex networks

BIOT 5120 - Foundations in Biotechnology

PHTH 6800 - Causal Inference in Public Health

University of Washington

QSCI 482 - Statistical inference in applied research I

QSCI 497 - Complex analysis using agent based models

STAT 567 - Statistical analysis of social networks

MATH 324 - Advanced multi-variable calculus I

INFO 371 - Advanced methods in data science

INFO 430 - Advanced database design and management

CSE 373 - Data structures and algorithms
