github.com/kishorevasan ◊ vasan.k@northeastern.edu ◊ kishorevasan.github.io

OBJECTIVE STATEMENT

I am a computational social scientist, specializing in employing data-driven methodologies to uncover the complexities of human behavior. With expertise in machine learning, causal inference, and network science, I bring a valuable skill set to interdisciplinary projects. My interests extend across diverse domains, including health sciences, blockchain, and the metaverse.

EDUCATION

Northeastern University

PhD in Network Science

Research direction: networks and human behavior

Advisor: Albert-Laszlo Barabasi

September 2020 - Present

Boston, Massachusetts

University of Washington

Bachelor of Science

Major: Informatics - Data Science; Minor: Quantitative Science

Advisor: Jevin West

September 2016 - June 2020

Seattle, Washington

TECHNICAL STRENGTHS

Computer Languages

Python, R, MySQL, d3.JS, Three.JS, Java, React, HTML

Software & Tools

RStudio, Gephi, Cytoscape, networkx, matplotlib, pandas, pytorch

EXPERIENCE

Meta Inc.

AI Research Intern

May 2024 - Present

Center for Complex Networks Research, Network Science Institute

Graduate Research Associate

Sept 2020 - Present

Determining optimal career choices to increase chess performance

June 2023 - Present

- A chess player's success is influenced not only by their individual abilities but also by the interactions with their fellow players who participate in similar tournaments.
- We employ causal inference techniques on large observational data from chess tournaments. The project features a special focus on improving female participation in chess competitions.

Human nature of metaverse mobility

2024

May 2022 - April

- In contrast to mobility in the physical world, mobility in the metaverse lacks manifested geographical boundaries, calling for fresh perspectives to understand human behavior.
- I investigate how individuals build their visitation space, and how the presence of a shared virtual environment impacts macroscopic movements and mobility networks.

Social processes underlying drug innovation in clinical trials

Sept 2020 - Sep 2022

- Drug exploration is rarely an isolated biological process. Social effects such as repeatedly testing known drug targets, affects collective drug exploration.

- The goal of the project is to identify the fundamental mechanisms that govern drug exploration and develop optimal strategies of unbiased drug exploration.

Discerning artist success in NFTs and Crypto Art

April 2021 - December 2021

- NFTs took the world by storm after Beeple sold his famous artwork for over \$69 Million. But are all artists equally successful? What is the role of collectors, and fan base in ensuring artist success?
- We identify the important variables that determine success of new artists, demonstrate the presence of taste in the collecting behavior of collectors, and measure the network effects in crypto art.

DataLab, Information School

September 2017 - August 2020

Undergraduate Research Associate

Collective dynamics in co-funding of clinical trials

July 2019 - August 2020

- Assessing the scientific impact of different funding strategies in clinical trials. The goal is to untangle the relationship between funding agencies through a co-funding network.
- Funded by the Bill & Melinda Gates Foundation and Mary Gates Research Scholarship.

Measuring scientific buzz using keywords

July 2018 - June 2019

- Comparing the applicability of keywords and abstracts in describing research trends. I discovered that keywords are a powerful resource for identifying hot topics than abstracts.
- Funded through Mary Gates Research Scholarship.

Mapping cross-departmental collaboration at UW

September 2017 - August 2018

- How impactful are multi-departmental collaboration at a large scale public university? We discovered an effect of compartmentalization where departments that collaborate together, also cite each other.
- I worked on disambiguation of departmental and institutional affiliations of authors over 60k papers

Information School, University of Washington

Spring 2018 - Spring 2019

Teaching Assistant, INFO 201 - Data Visualization using R.

- As a TA for over 100 students, I conducted weekly lab sessions, answered online questions, and graded weekly assignments. The course covers source control and interactive data visualization principles.

Genpact Inc.

June 2017 - August 2017

Data Science Intern

- Enhancing customer care analytics by automatic emotion recognition system by extracting voice features and unsupervised topic clustering of GM Financial chat transcripts using latent semantic analysis.
- Worked in a team of 4 people and presented a proof of concept to the upper management.

PUBLICATIONS

Journal Publications

Human mobility in the metaverse

TBA

Kishore Vasan, Marton Karsai, and Albert-Laszlo Barabasi.

Under review: Nature Human Behavior

The Clinical Trials Puzzle: How network effects limit drug discovery Nov 2023
Kishore Vasani, Deisy Gysi, and Albert-Laszlo Barabasi.
Cell iScience

Quantifying NFT-driven networks in crypto art Feb 2022
Kishore Vasani, Milan Janosov, and Albert-Laszlo Barabasi.
Scientific Reports

The hidden influence of communities in collaborative funding of clinical science Aug 2021
Kishore Vasani and Jevin West.

Undergraduate Research Symposium Presented work on collaborative funding May 2020

SERVICE AND ACHIEVEMENTS

Mary Gates Research Scholarship

2018 - 2019

- A highly selective award given to undergraduates at the University of Washington pursuing research.
- I received this award to develop techniques to map research trends and study funding mechanisms.

Moholy-Nagy University of Art and Design (MOME)

Spring 2021

- A part-time contract to advise on emerging trends in the art world using a data driven approach

Undergraduate Admission Committee

Spring 2019

- Helped review undergraduate applicants for Informatics, a competitive major.
- Comprehensively reviewed the applicant based on personal statement, intent to major, and grades.

Society of Network Scientists, UW

Fall 2019 - Summer 2020

Co-Founder, Vice President

- A campus wide initiative with an aim to promote and encourage research in network science. The organization acts as a platform for fellow researchers to interact and collaborate.
- We host weekly reading groups on social networks, panel discussions, and invite distinguished speakers.
- The group also serves an eScience Special Interest Group (SIG) on networks, and a local chapter of *The Society of Young Network Scientists* (SYNS).

Reviewer

- Book on cryptocurrency, Oxford University Press
- Journal article, Electronic Markets
- Journal article, BMC Bioinformatics
- Journal article, Qeios

SELECTED CLASSROOM PROJECTS

In search of food

September - December 2020

The breakdown and robustness of food flow in the United States Complex Networks and applications

- Food flow patterns are an essential component of society and serves as a complex system of distribution between producers, consumers, and distributors. Yet, we know little about the impact of food epidemics.
- I find that every county is highly dependent on counties for specific food commodity, indicating a complex web of connections driven by food commodity.
- Finally, I find that the network is fairly robust towards targeted removal of distribution channels primarily due to the local dependence for food supplies.

Crawling Wikipedia Graph

April 2019 - June 2019

Exploring the edit dynamics of users in Wikipedia

Statistical Analysis of Social Networks

- Mining large graphs reveals information; temporal network of the same reveal evolution. However, performing novel algorithms on these large graphs can be computationally expensive. We need methods that can provide an un-biased sample that would be representative of the underlying large network.
- In this work, we evaluated different random walks by crawling a large online editing network, Wikipedia.
- Our *findings* include - simple random walk is ineffective when sampling graphs with high tailed distribution, and re-weighted random walk outperforms other methods for graph sampling.

COURSEWORK

Northeastern University

PHYS 5116 - Complex networks and application I
NETS 6116 - Complex networks and application II
PHYS 7332 - Graph machine learning
POLS 7334 - Social network analysis
NETS 7341 - Network economics
PHYS 7335 - Dynamical processes in complex networks
BIOT 5120 - Foundations in Biotechnology
BIOL 5595 - Cellular and Molecular Neuroscience
PHTH 6800 - Causal Inference in Public Health

University of Washington

QSCI 403 - Introduction to resampling inference
QSCI 482 - Statistical inference in applied research I
QSCI 483 - Statistical inference in applied research II
QSCI 497 - Complex analysis using agent based models
STAT 567 - Statistical analysis of social networks
MATH 308 - Matrix algebra with applications
MATH 309 - Linear analysis
MATH 324 - Advanced multi-variable calculus I
INFO 371 - Advanced methods in data science
INFO 430 - Advanced database design and management
CSE 373 - Data structures and algorithms
CSE 415 - Introduction to artificial intelligence
